

APIMONDIA

48TH INTERNATIONAL CHILE APICULTURAL CONGRESS 2023

September 4th - 8th, 2023

Sustainable Beekeeping, from the south of the world

ABSTRACT SUBMISSION DEADLINE IS EXTENDED TO MAY 1ST, 2023!

www.apimondia2023.com

There is a great interest and a very good number of abstract submission especially in the last days but due to the requests from beekeeping community, academicians and scientists, Organizing Committee decided to extend the Abstract Submission Deadline to May 1st, 2023.

SCIENTIFIC PROGRAM

The 48th Apimondia Congress in Santiago, Chile will have three days focused on the subjects below. Please join us in Chile for discussions on these topics and so much more.

1. Sustainable beekeeping in a changing world

This day will focus on sustainable beekeeping and include the act of bee farming using principles of ecology, where the use of bees respects the rules of their environment. Beekeeping that respects the environment can be sustainable and profitable, even as climate change is making beekeeping more challenging.

2. Value added products from the hive

Honey and beeswax are the primary products that beekeepers rely upon. However, propolis, pollen, royal jelly, body products, bee venom and more are valuable products from the hive that beekeepers large and small can use to increase profits from beekeeping. Additionally, these products are valuable food and therapeutic resources that contribute to both food and pharmaceutical industries ensuring better human health. This day will focus on these "value added products" and how to integrate them into your beekeeping.

3. Land use, biodiversity and beekeeping

The roles that land use change and biodiversity play in the health and productivity of managed and wild bees will be discussed. Beekeeping relies on having good forage and this is in turn impacted by changing land use patterns. In particular, intensive farming, urbanization and climate change are making it difficult to find good locations for managed bees and impacting wild pollination.
